

CAP182 SS1

DATA Request

This request is made to STADIOalot for detailed historical data including customer, order, product and seller information. The briefing report states that STADIOalot records data on searches, views, add-to-basket events, purchases, deliveries and returns dating back 6 years for catalogue data, 5 years for returns and seller data and 3 years for search data. If possible, the full available data history should be supplied such that trends and notable changes over time can be assessed. The requested data should separate predictor variables from output variables to reduce the risk of data leakage during modelling.

Please supply stable, anonymised identifiers so that records can be joined across tables, timestamps in consistent format and time zones, clear units for numerical variables, and an indication of missing, unknown and unreliable values. Do not include any unnecessary identifier variables.

Table 1: Orders and Transactions

Data Label	Data Type	Example	Additional Information
order_id	String	ORD10458291	Unique order identifier; must be stable across all related tables.
customer_id	String	CUS78214	Customer identifier used to link customer history. Anonymised.
order_datetime	Datetime	2026-03-18 14:32:10	YYYY-MM-DD hh:mm:ss; timestamp when order was placed.
prd_id	String	PRD88321	Unique product identifier.
seller_id	String	SEL01984	Marketplace seller identifier; identify STADIOalot first-party orders consistently.
quantity	Integer	2	Number of units purchased in the order line; >= 1
unit_price	Numeric	499.99	Price per unit in South African rand; retain decimals.
discount_amount	Numeric	50.00	Discount applied to the item/order line in rand; >= 0
promotion_code	String/categorical	SUMMER25	Promotion identifier where applicable; retain an explicit 'none' value.
payment_method	Categorical	Card	Controlled category list; do not provide card numbers or banking credentials.
delivery_province	Categorical	Gauteng	South African province; use standard province labels/codes.
delivery_postal_area	Categorical	2001	Prefer a coarse/postal-area representation rather than exact address.
order_value	Numeric	949.98	Total order/line value in rand; specify whether before or after discounts
basket_size	Integer	4	Number of distinct or total items in the basket; define which is supplied.
device_type	Categorical	Mobile	Device category used to place the order, if available.
channel	Categorical	Website	Website/app/mobile or other order channel.

Table 2: Customer Behaviour

customer_id	String	CUS78214	Pseudonymised ID matching the Orders table.
account_age_days	Integer	820	Days between account creation and order date.
previous_orders	Integer	18	Count of completed previous orders before the prediction point.
previous_returns	Integer	3	Count of previous returned orders/items before the prediction point; no future information.
previous_return_rate	Numeric	0.167	Historical return proportion calculated only from information available before the order.
previous_purchase_value	Numeric	8450.50	Cumulative historical spend before the order, in rand.
days_since_previous_order	Integer	12	Days from previous order to current order; null for first order.
session_searches	Integer	7	Searches in the current session before purchase.
product_views	Integer	15	Product/category views before purchase.
add_to_basket_count	Integer	4	Add-to-basket events before purchase.
abandoned_baskets	Integer	2	Historical/current-session abandoned basket count, with timing clearly defined.
customer_segment	Categorical	Frequent	Existing segment if available; provide segment definitions.
